NX Client Version 5 configuration

You can download NoMachine for Windows from http://ftp.esrf.fr/pub/cs/nx
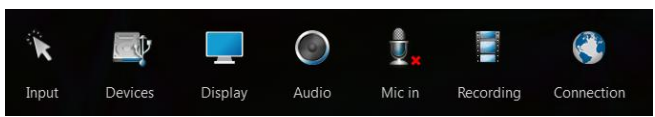

Start the NoMachine client and click on the "New" icon, to create a new connection.	
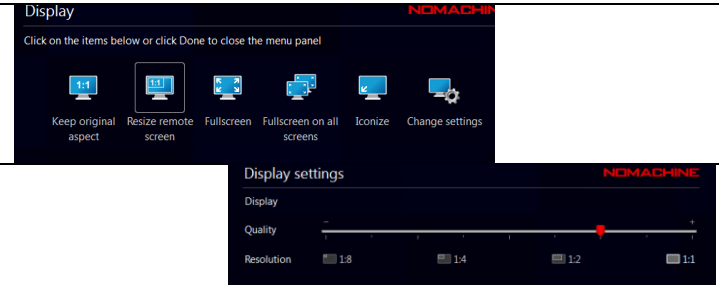

Connection from **outside**	Connection from **inside**
Protocol: **SSH** Host: **firewall.esrf.fr** Port: **5622** Select **"Use the system login"** Select **"Password"** Select **"Don't use a proxy"** Done	Protocol: **SSH** Host: **nx.esrf.fr** Port: **22** Select **"Use the system login"** Select **"Password"** Select **"Don't use a proxy"** Done

Select the "connection icon" and click on Connect
Type your login and password to open a connection.
Once logged, you can select a "suspended session" if you have one,
or create a new one: click on <**Create a new virtual desktop**>, then on "**Automatically select a node**".
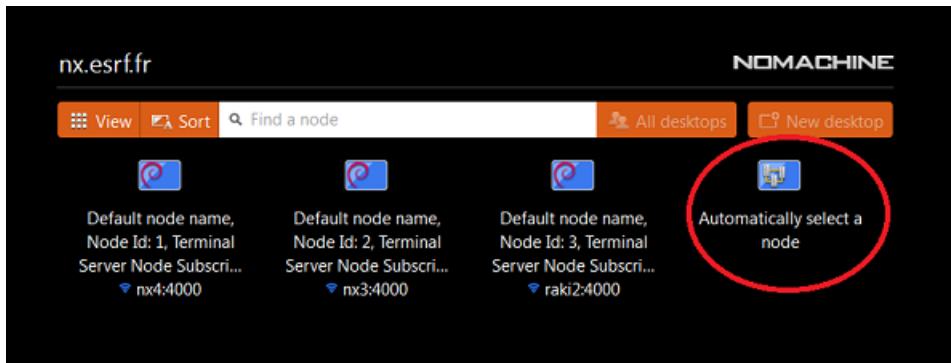

To kill a session, right-click on it and select "Terminate session"

To access the Menu Panel move your cursor to the page-peel in the top right-hand corner of the window.	Menu Panel

Some setting: - If you need the "@" on an azerty keyboard: Select "Input" and unselect "Use hot-key for menu access" - If your display is blurred: Display -> Resize remote screen. - If your network speed is slow, click on "Change setting" and reduce the "Quality"	

If the qwerty/azerty keyboard is not correctly managed, you can configure it via the xfce keyboard setting.
