

Igor Khokhriakov

Mobile Tango Software Development Kit (mTangoSDK) v1.0.1

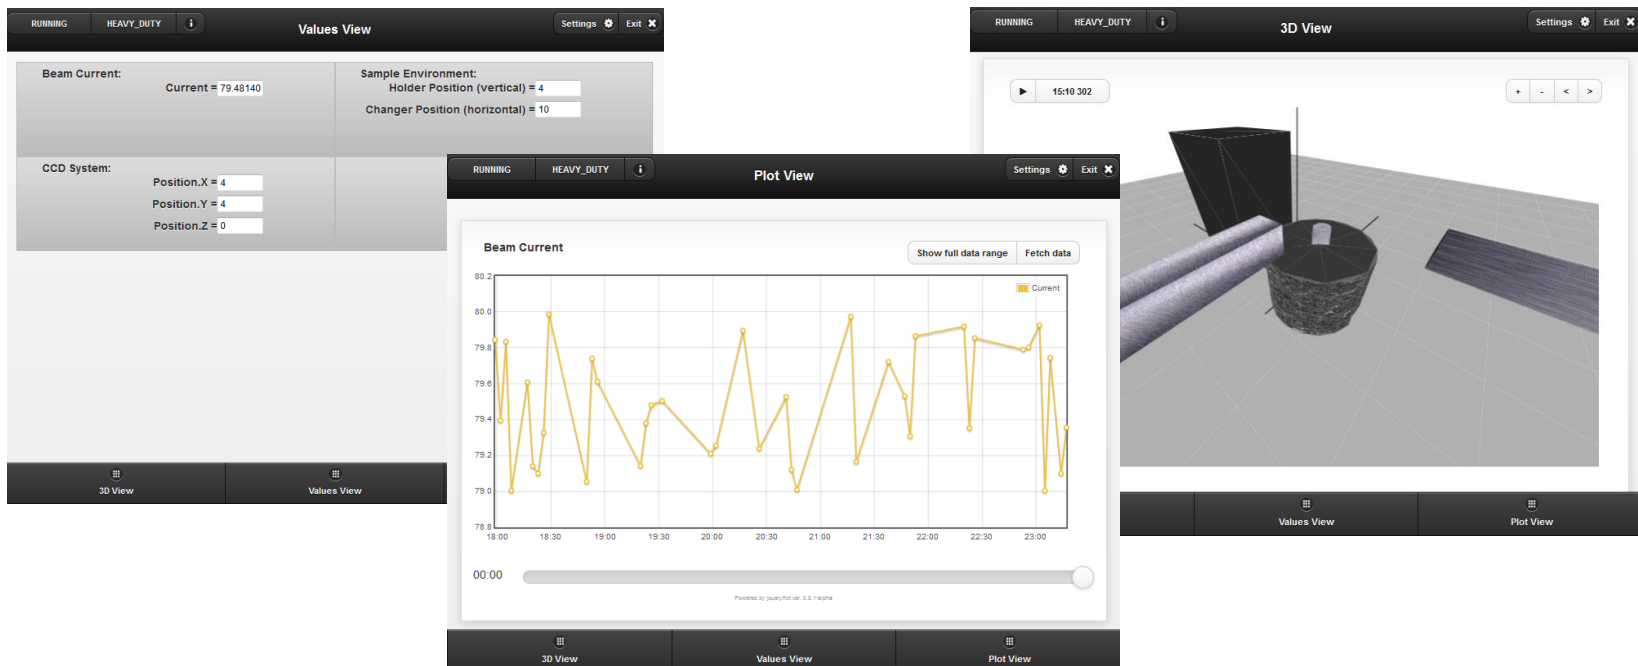

29th Tango meeting, Solaris, Krakow, Poland
20-22.05.2015

mTangoSDK v0.0.3 – Origin

Idea:

- Monitor the ongoing experiment from a mobile device
- Review experiment when device is offline
- Configure easily for a variety of different instruments

Goals:

mTangoSDK v0.0.3

Was presented in Grenoble and Barcelona in the 2013.

Distributed as a single archive:

Web-Frontend; JavaScriptMVC;
embeded PhoneGap project;
bunch of ant scripts

Conclusion: a good starting point...
but not really user friendly

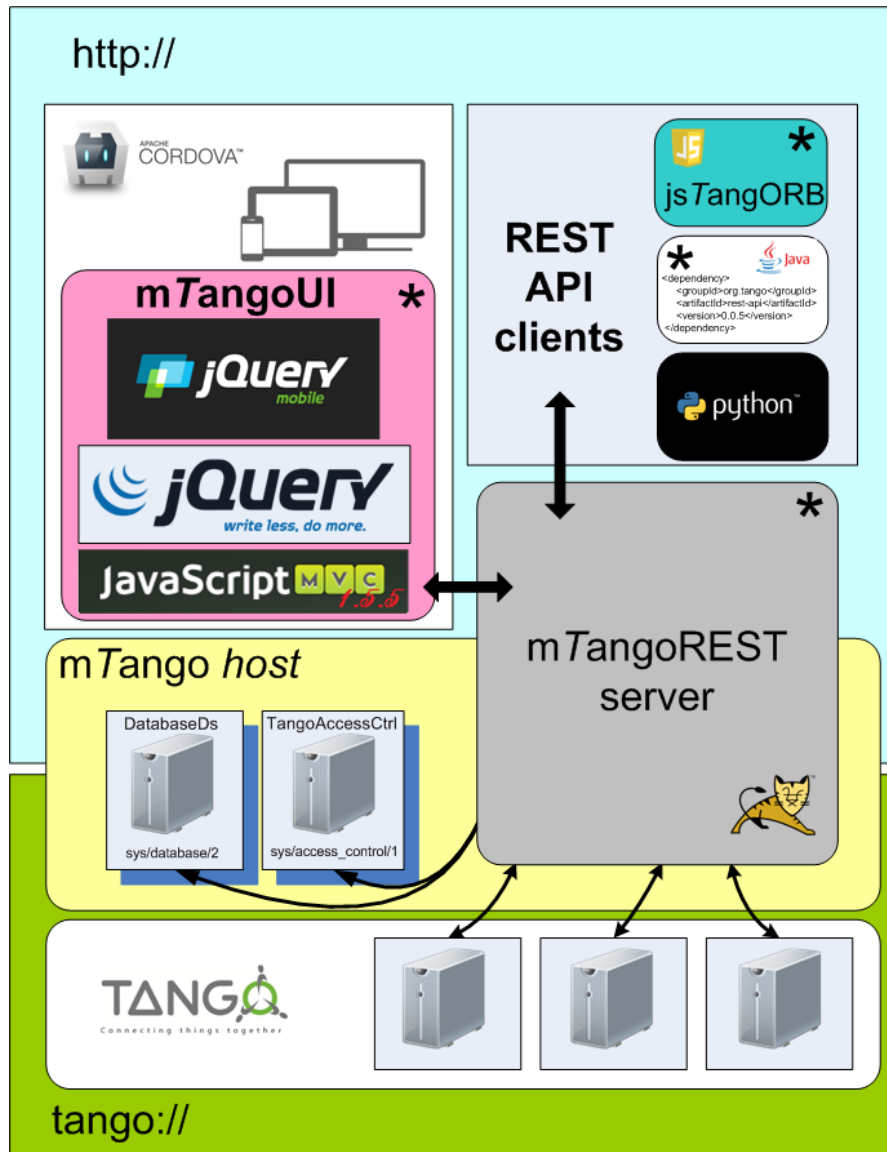

mTangoSDK v1.0.1

Totally redesigned, restructured and reorganized

Released in March, 2015

mTangoSDK v1.0.1

Tools:

•mTangoREST.server

a java web application that provides REST API to tango servers. Basically it is a bridge from "http://" to "tango://"

•mTangoREST-client for Java

a maven artifact. This artifact provides java classes for mTango-REST java client development

•jsTangORB

a javascript library for mTango-REST javascript client development

•mTangoUI

a framework for rapid web/mobile UI development

mTangoSDK v1.0.1. Tools features.

mTangoREST.server:

- easy setup
- two steps authorization
- DatabaseDs and TangoAccessControl integration
- events support
- server side caches and optimizations
- images into response injection

mTangoREST-client for Java:

- distributed via maven
- predefined type tokens

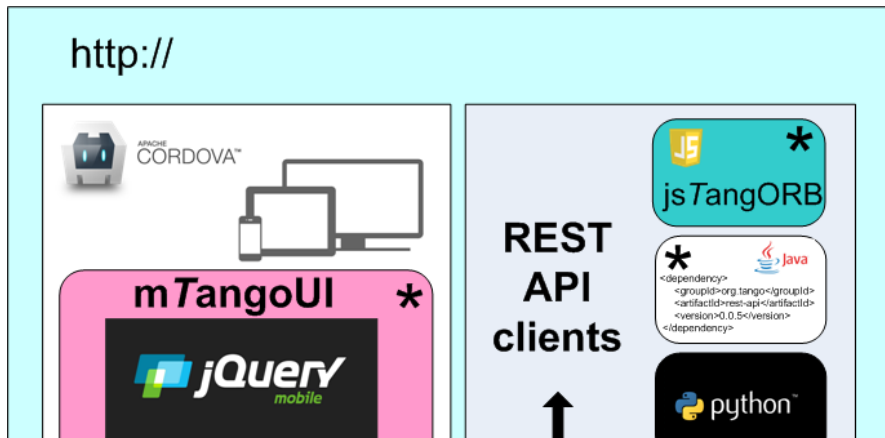

jsTangORB:

- easy setup
- high level abstraction API to mTangoREST.server
- client side caches and optimizations

mTangoUI:

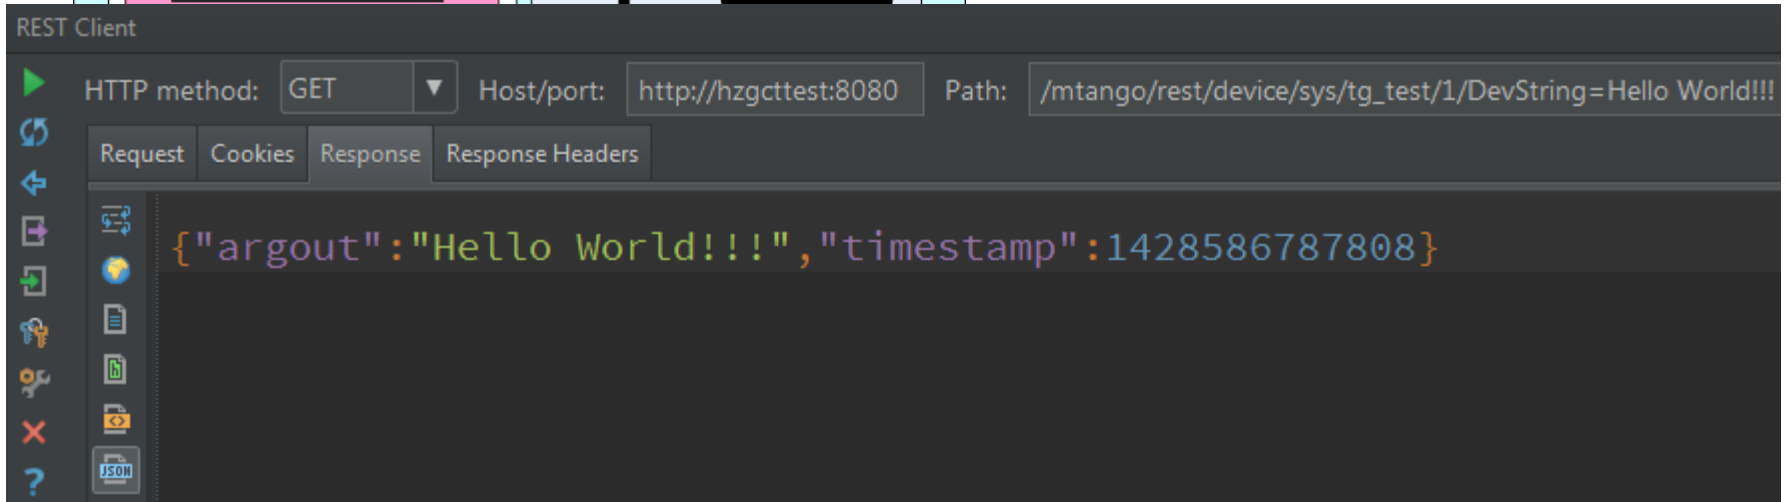

- easy integration with Apache Cordova
 - predefined UI components
 - reliable error handling
 - client side optimizations
-

mTangoSDK v1.0.1. mTangoREST.server

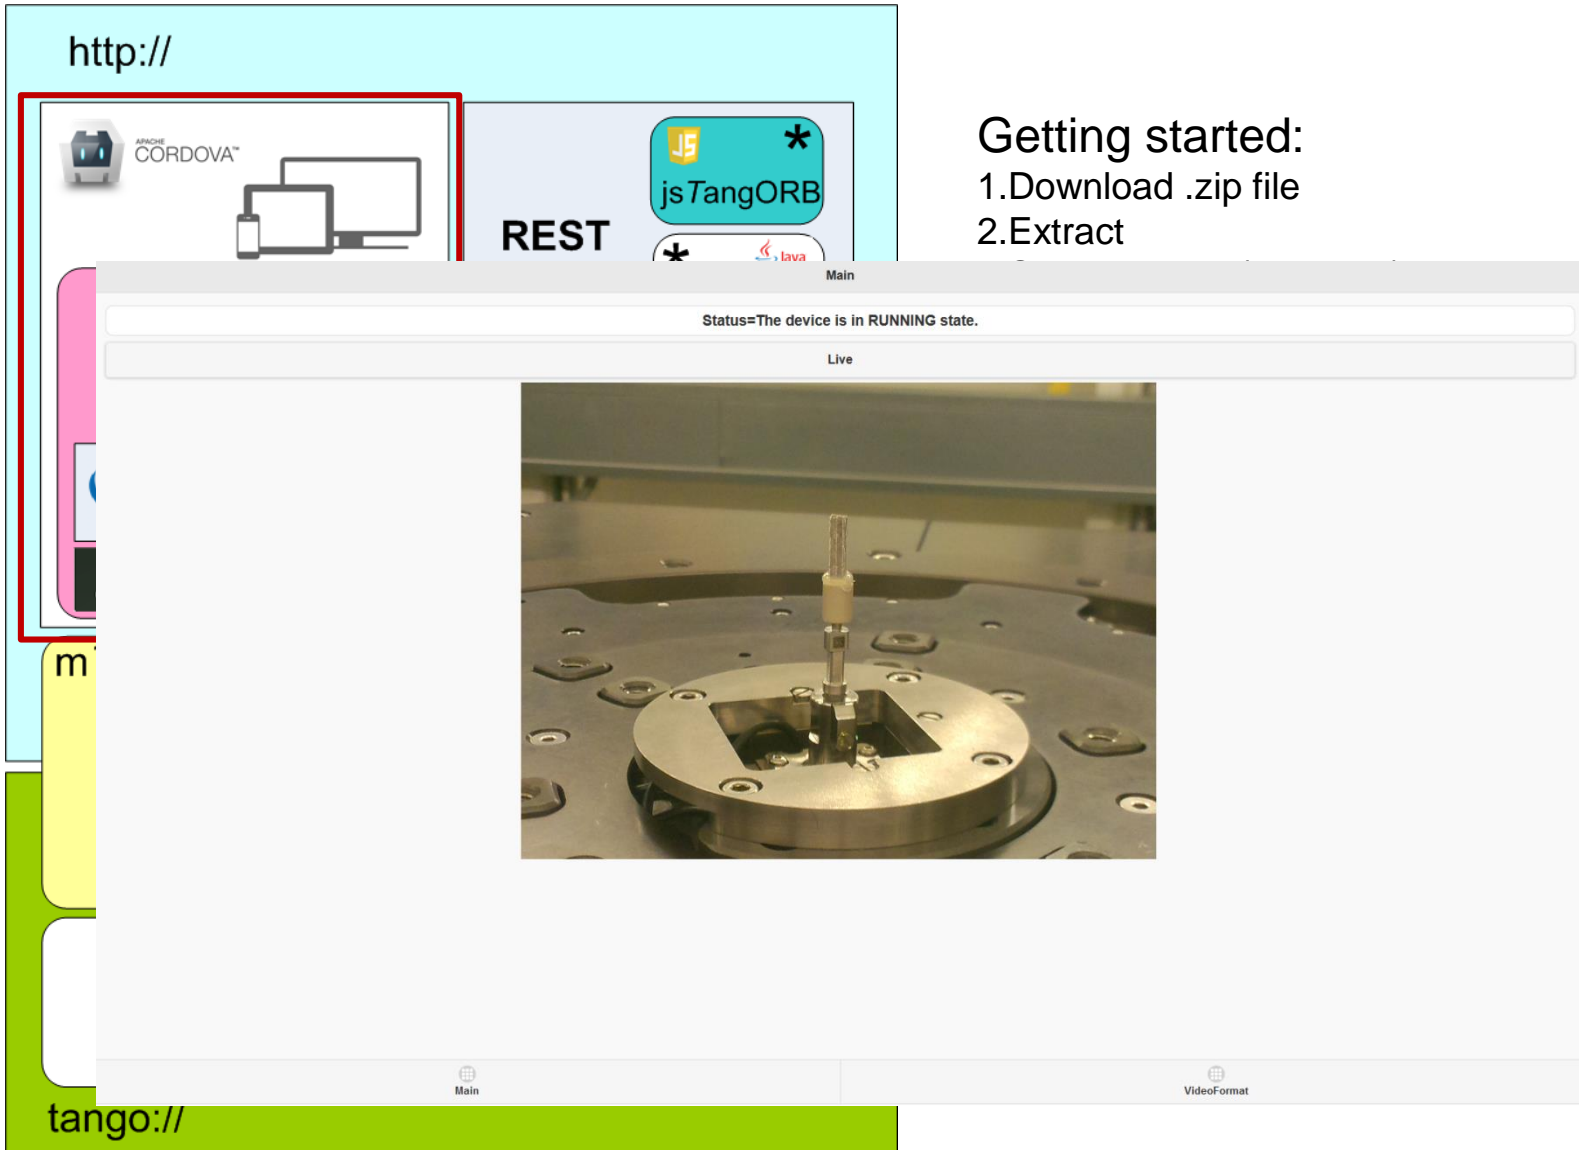

Getting started:

1. Download .zip archive
2. Extract .war file from the .zip into the servlet container's webapps folder
3. Define users and roles
4. Restart the servlet container

mTangoSDK v1.0.1. mTangoUI

http://

Getting started:
1. Download .zip file
2. Extract

m

tango://

mTangoSDK v1.0.1. mTangoUI & jsTangORB

mTangoUI is an extension to **JavaScriptMVC** which includes:

- jsTangORB engine
- mTangoUI engine
- mtango command line tools

jsTangORB is a javascript library that provides an API [aka **TangORB.jar**]

- communicates with the server via JsonP
- optimizes and caches requests to the server
- provides events support [based on Comet]

mTangoUI engine – next slides

mtango cli tools – a bunch of helpers, like create/remove apps; create/remove app's pages; create jsTango proxies

mTangoSDK v1.0.1. mTangoUI engine

fld_text_ro

```
<mtango:attr src="sys/tg_test/1/double_scalar"  
  view="fld_text_ro"  
  poll="3000">  
</mtango:attr>
```

double_scalar=-174.59096466723585

fld_text_rw

```
<mtango:attr src="sys/tg_test/1/double_scalar_w"  
  view="fld_text_rw"  
  read="">  
</mtango:attr>
```

double_scalar_w=3.14

mTangoSDK v1.0.1. mTangoUI engine

fld_list_ro

```
<mtango:attr src="sys/tg_test/1/double_spectrum"  
  view="fld_list_ro"  
  read="">  
</mtango:attr>
```

double_spectrum_ro:
151
194
107
36
71
...

mTangoSDK v1.0.1. mTangoUI engine

fld_list_rw

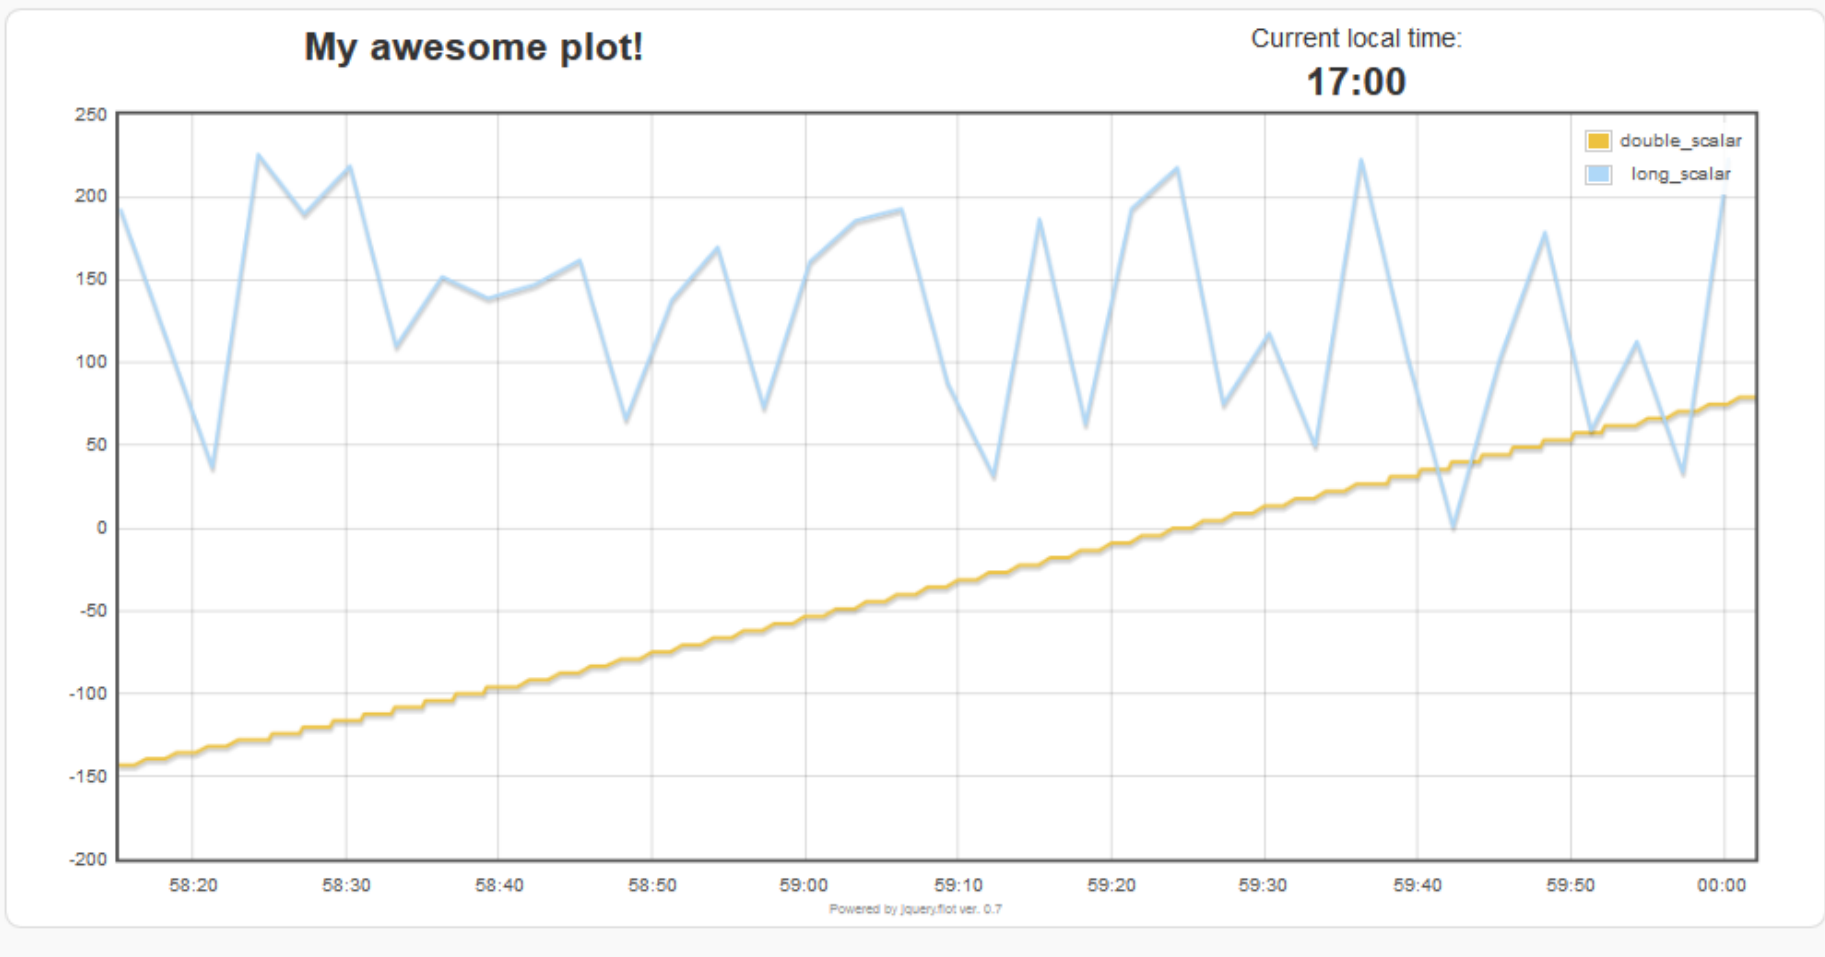

```
<mtango:attr src="sys/tg_test/1/double_spectrum_w"  
  view="fld_list_rw"  
  read="">  
</mtango:attr>
```

double_spectrum:	
1.23	
3.14	
7.98	
5.64	
6.123	
...	

mTangoSDK v1.0.1. mTangoUI engine

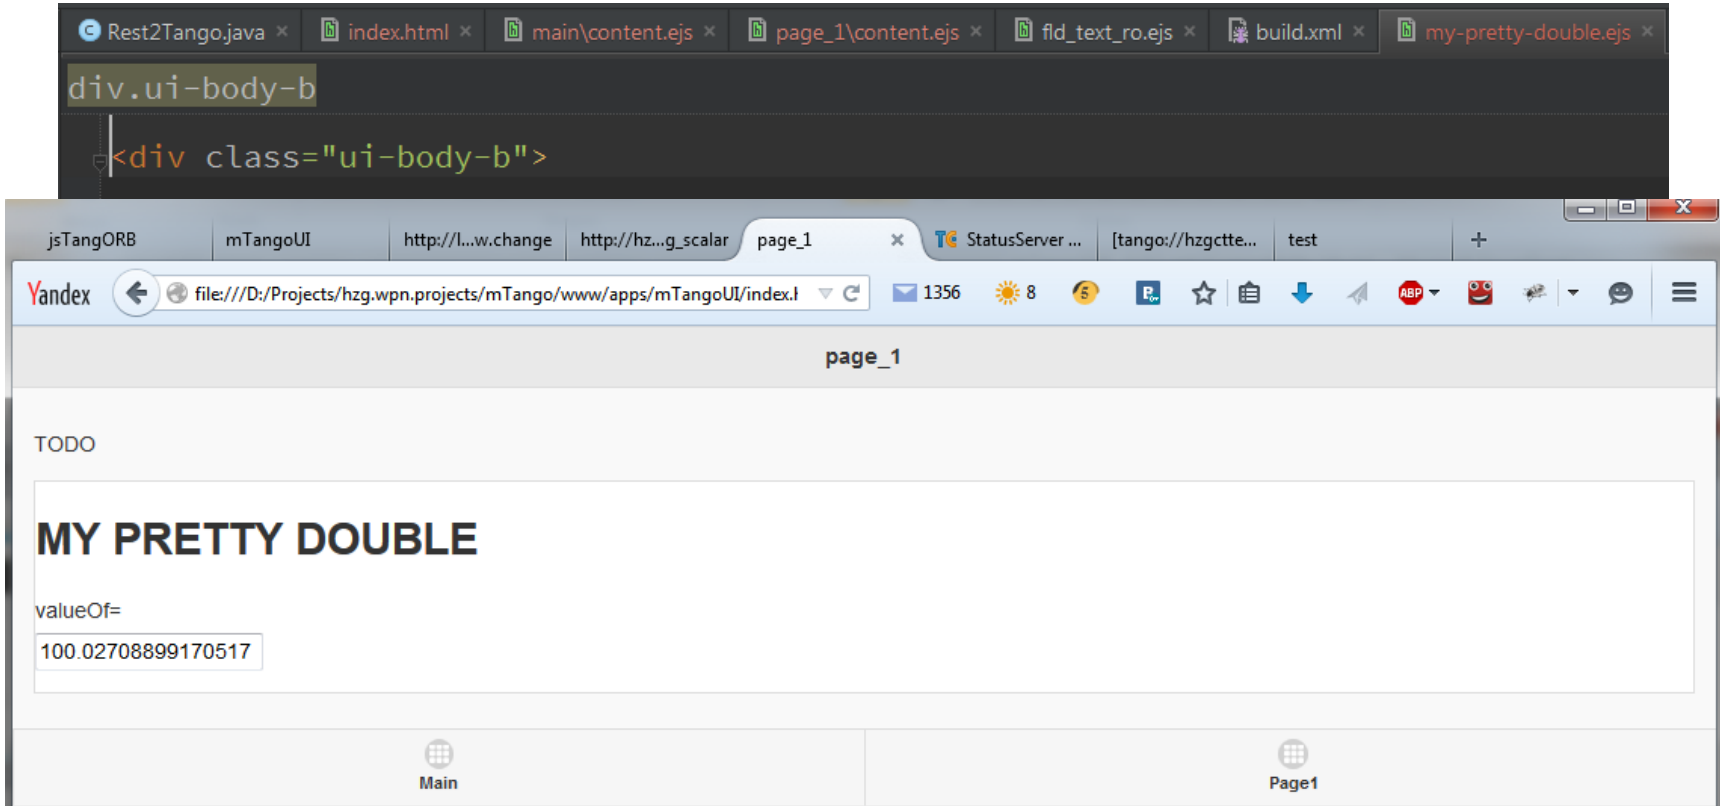

Plots:

```
<mtango:plot label="My awesome plot!"
```

mTangoSDK v1.0.1. mTangoUI engine

Custom field view:

The image shows a development environment with an IDE and a browser. The IDE window displays the following code:

```
div.ui-body-b  
<div class="ui-body-b">
```

The browser window shows the following content:

page_1

TODO

MY PRETTY DOUBLE

valueOf=
100.02708899170517

Main Page1

jsTangORB. Caching and optimizations

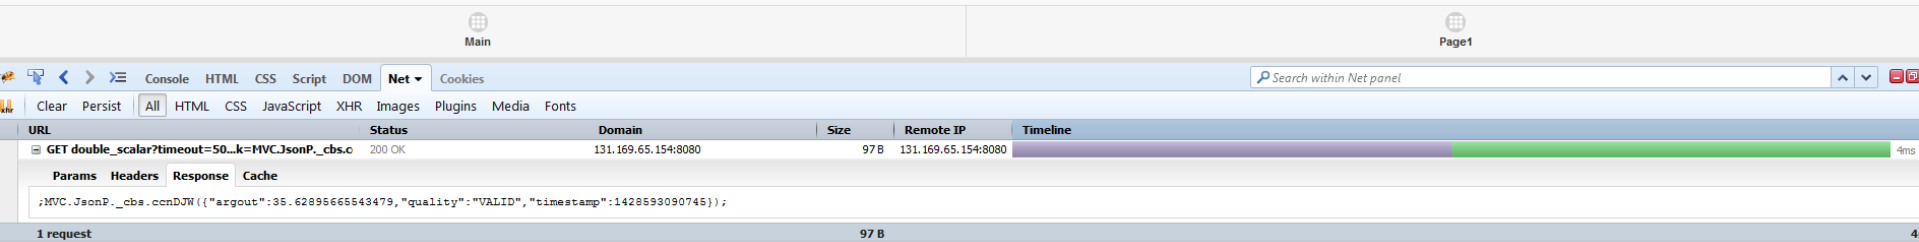

TEST

double_scalar=35.62895665543479

double_scalar=35.62895665543479

double_scalar=35.62895665543479

double_scalar=35.62895665543479

The screenshot shows a web browser's developer tools interface. The top part displays the 'Main' and 'Page1' panes. Below that, the 'Net' panel is active, showing a list of network requests. The first request is highlighted, showing a GET request to 'double_scalar?timeout=50...k=MVC.JsonP_obs.o' with a status of 200 OK. The response is visible in the 'Response' tab, showing a JSON object: `;MVC.JsonP_obs.ccnDJW({"argout":35.62895665543479,"quality":"VALID","timestamp":1428593090745});`. The bottom status bar indicates '1 request' and '97 B'.

URL	Status	Domain	Size	Remote IP	Timeline
GET double_scalar?timeout=50...k=MVC.JsonP_obs.o	200 OK	131.169.65.154:8080	97 B	131.169.65.154:8080	

Params Headers Response Cache

```
;MVC.JsonP_obs.ccnDJW({"argout":35.62895665543479,"quality":"VALID","timestamp":1428593090745});
```

1 request 97 B

mTangoSDK v1.0.1. mTangoUI

All the UI components are “clever” enough to suspend their activities

- when they are on the hidden page
- application pauses

To deploy onto a mobile device using Apache Cordova:

1. Setup cordova
 2. Setup target platform SDK
 3. Copy mTangoUI project into {CORDOVA}/www
 4. `cordova run [for debug]`
 5. Publish
-

mTangoSDK v1.0.2

What?

Issues (1–12 of 12)

Title	T	P	Status	Votes	Assignee	Version
#45: Reimplement as cordova plugin <small>jmvc-applicati...</small>			NEW		 Ingvord	1.0.2
#84: Requests multiplexing/demultiplexing <small>jmvc-applicati...</small>			NEW		 Ingvord	1.0.2
#80: Add mtango/help js script <small>jmvc-applicati...</small>			NEW		 Ingvord	1.0.2
#79: Bind cordova_controller to device <small>jmvc-applicati...</small>			NEW		 Ingvord	1.0.2
#64: DeviceAttributeUI#write returns previous value after write <small>jmvc-applicati...</small>			NEW		 Ingvord	1.0.2
#62: Admin console for tango.war <small>web-frontend</small>			NEW		 Ingvord	1.0.2
#75: Unsubscribe from an event on the server side if not active for a while <small>web-frontend</small>			NEW		 Ingvord	1.0.2
#74: xsd for mtango namespace <small>jmvc-applicati...</small>			NEW		 Ingvord	1.0.2
#72: Polling buffer <small>jsTangORB</small>			NEW		 Ingvord	1.0.2
#71: DeviceAttribute#poll retries policy <small>jsTangORB</small>			NEW		 Ingvord	1.0.2

When? – August/September 2015

Thank you!
